Art Unit: 2154

DETAILED ACTION

Page 2

1. Claims 1-20 are presented for the examination.

Information Disclosure Statement

2. The information disclosure statement (IDS) submitted on 12/24/2003 and 10/05/2006 has been considered by the examiner.

Claim Rejections - 35 USC § 112

- 3. The following is a quotation of the second paragraph of 35 U.S.C. 112: The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- Regarding claims 9, 14 and 18-20, the phrase "substantially the 4. same " renders the claim indefinite because it is unclear it fails to point out what is included or excluded by the claim language. See Ex parte Fressola, 27 USPQ2d 1608 (Bd. Pat. App. & Inter. 1993).

Art Unit: 2154

Page 3

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.
- 6. Claims 1-20 are rejected under 35 U.S.C. 102(e) as being anticipated by Ishida et. al. (S 2002/0167851) (hereinafter Ishida).
- 7. As per claim 1, Ishida discloses a data processor for communicating data to and from a host computer via an interface with a packet including a packet ID (fig 1A, page 3, para #0073), the data processor comprising: a packet recognition circuit for receiving the packet including the packet ID (fig 1B) from the host computer (fig 1A) and recognizing the type of the packet from the packet ID (fig 1B, page 4, para #0080); and a packet length (page 2, para #0045) measuring circuit connected (page 3, para #0073; fig 3, page 4, para #0080) to the packet recognition circuit for measuring packet length of the packet received from the host computer (fig

Art Unit: 2154

- 1A) and determining whether the measured packet length (fig 3, page 2, para #0045) is in accordance with the packet type (data transfer type, page 3, para #0073; fig 3, page 4, para #0080) to recognized by the packet determination circuit (fig 3, page 4, para #0080).
- 8. As per claim 2, Ishida discloses the packet length measuring circuit generates a suspension signal for suspending data transfer from the data processor to the host computer when the measured packet length is not in accordance with the packet type (data transfer type, page 3, para #0073; fig 3, page 4, para #0080).
- 9. As per claim 3, Ishida discloses the interface includes a USB interface (fig 1A, page 3, para #0067).
- 10. As per claim 4, Ishida discloses a data processor for communicating data to and from a host computer via an interface (fig 1A), the data processor comprising: a plurality of end points (host, device, Fig 1A, page 3, para #0070), each processing a transaction corresponding to a data transfer request from the host computer (host Fig 1A, page 3, para #0070), wherein each of the end points stores a data toggle bit (toggle bit, fig 17A-17B) having a value that is inverted whenever a predetermined packet from the

Art Unit: 2154

host computer is received (toggle bit, fig 17A-17B); and a toggle bit switching circuit connected to the end points to determine whether a first end point (page 2, para #0044-#0049) that received a transfer request in a previous transaction and a second end point that received a transfer request in the present transaction are substantially the same (toggle bit, fig 17A-17B, page 2, para #0044-#0049), wherein the toggle bit switching circuit inverts the value of the data toggle bit stored (toggle bit, fig 17A-17B) in the first end point when the first end point differs from the second end point (page 2, para #0044-#0049).

11. As per claim 5, Ishida discloses each end point has an end point number, and the predetermined packet includes the end point number (page 2, para #0044_#0049); and the toggle bit switching circuit includes an end point storage section for storing the end point number included in the predetermined packet transmitted from the host computer (fig 1A) and determines whether the first and second end points are substantially the same by comparing the end point number of the first end point stored in the storage section with the end point number of the second end point (page 2, para #0044_#0049).

Art Unit: 2154

12. As per claim 6, Ishida discloses the interface includes a USB interface, and the end point is included in a token packet (Page 3, para #0067).

Page 6

- 13. As per claim 7, Ishida discloses the toggle bit switching circuit inverts the data toggle bit value of the first end point when receiving a handshake packet from the host computer (toggle bit, fig 17A-17B, page 2, para #0044-#0049).
- 14. As per claim 8, Ishida discloses the interface includes a USB interface (Page 3, para #0067).
- 15. As per claim 9, Ishida discloses a data processor for communicating data to and from a host computer via a predetermined interface with a packet including a packet ID (fig 1A, page 3, para #0073), the data processor comprising: a packet recognition circuit for receiving the packet including the packet ID from the host computer and recognizing the type of the packet from the packet ID (fig 1B, page 4, para #0080);

a packet length measuring circuit connected to the packet recognition circuit for measuring packet length of the packet received from the host computer (fig 3, page 2, para #0045) and determining whether the measured packet length is in accordance with the packet type recognized by

Art Unit: 2154

the packet determination circuit (data transfer type, page 3, para #0073; fig 3, page 4, para #0080);

Page 7

a plurality of end points (host, device, Fig 1A, page 3, para #0070), each processing a transaction corresponding to a data transfer request from the host computer (page 2, para #0044-#0049), wherein each of the end points stores a data toggle bit (toggle bit, fig 17A-17B) having a value that is inverted whenever receiving a predetermined packet from the host computer (page 2, para #0044-#0049); and a toggle bit (toggle bit, fig 17A-17B) switching circuit connected to the end points to determine whether a first end point that received a transfer request in a previous transaction and a second end point that received a transfer request in the present transaction are substantially the same (page 2, para #0044-#0049), wherein the toggle bit (toggle bit, fig 17A-17B) switching circuit inverts the value of the data toggle bit stored in the first end point when the first end point differs from the second end point (page 2, para #0044-#0049).

- 16. As per claim 10, Ishida discloses the interface includes a USB interface Page 3, para #0067).
- 17. As per claim 11-13, claims are rejected for the same reasons as claims 1-3, above.

Art Unit: 2154

18. As per claim 14-17, claims are rejected for the same reasons as claims

Page 8

4-8, above.

19. As per claim 18-20, claims are rejected for the same reasons as claims

4-9, above.

Conclusion

20. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure:

U.S. Patent 6,816,929

U.S. Patent 6,760,795

U.S. Patent 6,760,772

U.S. Patent 6,757,783

U.S. Patent 6,742,076

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Mohammad A. Siddiqi whose telephone number is (571) 272-3976. The examiner can normally be reached on Monday -Thursday.
